HANDBOOK FOR GEOGRAPHY TEACHERS

Prepared by the Standing Sub-Committee in Geography of the University of London Institute of Education

GENERAL EDITORS: G. J. CONS and R. C. HONEYBONE

'This carefully prepared book will be of great service to teachers of geography both in Britain and in other lands whose educational tradition and inspiration are British. It falls into two main parts: instructive articles, and exhaustive lists of publications and other sources of geographical information, as well as of equipment. Much careful labour must have been given to compiling these lists, which will prove most useful. The book is, in fact, one that every teacher of geography needs to have as a *vade mecum*.'—*The Times Educational Supplement*. Fourth edition, revised and reset. **22s. 6d.**

THE MEDITERRANEAN LANDS

D. S. WALKER has written primarily for the sixth forms of grammar and public schools. His book should also prove of interest to university students. Part I deals with the Mediterranean Sea itself and with the climate, vegetation and soils of the area as a whole; the climate and vegetation are treated rather more fully than is usual. The rest of the work which is organized in four parts, The Western Basin (Europe), The Western Basin (Africa), the Balkan Peninsula, and The Near East, is concerned with a straightforward description of the physical, human and economic geography of the countries of the Mediterranean. Where necessary the regional account is prefaced by some discussion of the historical, political and cultural background, and an up-to-date economics summary has been added for each state. **42s.**

JAPAN

A PHYSICAL, CULTURAL and REGIONAL GEOGRAPHY

G. T. TREWARTHA, Professor of Geography in the University of Wisconsin. A source of excellent pictures for work with classes on Asia, and of sample studies for lessons on Japan. In addition to basic geographical material, this book gives an overall picture of living conditions, culture and trends of the Japanese people. It is most readable, profusely illustrated, and contains many maps and tables. Fifth reprint. **65s.**

BELL

New 5th Edition

THE GROUNDWORK OF MODERN GEOGRAPHY

by A. WILMORE, D.Sc. *Revised by* E. PAYNE, M.Sc. **25s.** *net*

In the new edition of this indispensable textbook a chapter on Urban Geography has been added as well as notes on "millionaire" cities, nuclear fuels and blood groups. Statistics have been brought up to date and some new examination questions have been included.

REVISION COURSE IN WORLD GEOGRAPHY

by A. W. RAYNS, B.A. *Size* 11×8 *in. Two parts,* **6s.** *each*

This revision course for G.C.E. "O" level has proved very successful and has been widely adopted. Part One deals with (i) Ordnance Survey Maps, (ii) The World—General Principles, and (iii) Physical Geography. Part Two covers the regional geography of the British Isles and the rest of the world. Questions are provided in both parts of the course.

BELL'S CONCISE GEOGRAPHIES

by A. W. RAYNS, B.A. *Size* 9¾×7¼ *in. Fully illustrated.*

This series is designed for pupils of about 12–15 years of age. Simply and concisely written, the volumes are abundantly illustrated by clear sketch maps and well-chosen photographs. The text is built around the illustrations and questions are interspersed throughout.

First volumes: **ASIA, 6s. S. CONTINENTS, 6s. 6d.**
NORTH AMERICA, 5s.

EXERCISES ON ORDNANCE MAPS

by C. H. COX *and* A. J. MAGGS.

New Edition revised by A. W. RAYNS, B.A. *Size* 9¾×6 *in.* **3s. 6d.**

In the latest edition of this widely used book one map has been replaced and an additional photograph included. The book contains specimen extracts from 7th edition Ordnance Survey maps and notes on the National Grid are given.

Television for schools

Geography

Television for Schools Programmes have been produced by Associated-Rediffusion for nearly four years, and are now being received by 1500 schools. The Programmes, produced for various age-groups in primary and secondary schools and grammar school VIth forms, are intended to supplement the teacher's own work by using the resources of television to arouse the children's interest and show them aspects of school subjects which cannot be easily shown in the classroom.

An outline of the Programmes for each of the three terms in the school year is published each April or May. Teachers' Notes for individual series, to help with preparation and follow-up are sent to registered schools before the beginning of each term.

Geography Programmes have proved very successful. During the current school year the following series is being presented:—

The British Isles: This series which extends over the three terms of the year, examines the principal geographic features of these islands. In addition to the industries of each area, the series shows the way of life of the people and their response to their environment. Recent developments in these areas are also taken fully into account.

Autumn Term 1960. September 19th to December 9th. Programmes during this term included a general introduction to the physical and economic background of the British Isles and dealt specifically with the Highlands and the contrast between traditional activities and new developments, the Central Lowlands and the shipbuilding industry, Ulster and linen, South Wales and coal and the textile industry of the Pennines.

Spring Term 1961. January 16th to March 24th. Spring term programmes explained the diversity of English activities and industries. Areas for special study were the Pennines and the growth of the steel industry, the Midlands and its industrial and agricultural contrasts, the South West, and East Anglia's arable farming and Fens.

Summer Term 1961. April 24th to June 16th. During this term, the series will concentrate on the Home Counties. Life and work in the Weald will be visually described, and a programme on communications will follow logically on a study of the London Basin. In the last programme of term, there will be a summary of the whole work covered during the year.

These programmes are available in the areas served by Associated-Rediffusion (London), ATV (Midlands), STV (Scotland), TWW (South Wales and West of England), Southern Television, TTT (North East), Anglia Television (East Anglia), and Ulster Television (Northern Ireland).

SUMMER TERM, 1961 APRIL 24th TO JUNE 16th

Monday	2.45	Problems of Today	16 & over
	3.25	The Story of Medicine (Science)	About 14
